Threatened Swallowtail Butterflies of the World

Written by a senior scholar and master mariner, *Sailors and Traders* is the first comprehensive account of the maritime peoples of the Pacific. It focuses on the sailors who led the exploration and settlement of the islands and New Zealand and their seagoing descendants, providing along the way new material and unique observations on traditional and commercial seagoing against the background of major periods in Pacific history. The book begins by detailing the traditions of sailors, a group whose way of life sets them apart. Like all others who live and work at sea, Pacific mariners face the challenges of an often harsh environment, endure separation from their families for months at a time, revere their vessels, and share a singular attitude to risk and death. The period of prehistoric seafaring is discussed using archaeological data,

interpretations from interisland exchanges, experimental voyaging, and recent DNA analysis. Sections on the arrival of foreign exploring ships centuries later concentrate on relations between visiting sailors and maritime communities. The more intrusive influx of commercial trading and whaling ships brought new technology, weapons, and differences in the ethics of trade. The successes and failures of Polynesian chiefs who entered trading with European-type ships are recounted as neglected aspects of Pacific history. As foreign-owned commercial ships expanded in the region so did colonialism, which was accompanied by an increase in the number of sailors from metropolitan countries and a decrease in the employment of Pacific islanders on foreign ships. Eventually small-scale island entrepreneurs expanded interisland shipping, and in 1978 the regional Pacific Forum Line was created by newly independent states. This was welcomed as a symbolic return to indigenous Pacific ocean linkages. The book's final sections detail the life of the modern Pacific seafarer. Most Pacific sailors in the global maritime labor market return home after many months at sea, bringing money, goods, a wider perspective of the world, and sometimes new diseases. Each of these impacts is analyzed, particularly in the case of Kiribati, a major supplier of labor to foreign ships.

Children's Encyclopedia of Animals

The world's oceans cover just over 70.8 per cent of the Earth's surface, and yet we know more about the moon than what lies beneath these dark waters. As early as 5000 BC, efforts have been made to map these oceans, establish trade routes and discover new lands. In more recent years, this energy has focused downwards, into the ocean's inky depths and shadowy seabeds. Award winning writer Carolyn Fry explores all of the above, narrating centuries of maritime exploration - from James Cook to James Cameron - and the fascinating discoveries which helped to map the world. This book is produced in collaboration with the National Maritime Museum. Based in Greenwich, London, this prestigious museum has the largest archives for maritime history in the world, comprising of more than 1.5 million items. Dedicated to conservation, educational outreach and cutting-edge research, the NMM is a world-leading institution in the study of maritime history. This beautifully illustrated full-color book includes an incredible selection of rare maps from their archives, from historic sea charts to topographic maps of the ocean floor. Mapping the Oceans combines remarkable history with cutting edge science, including all you need to know about this fantastic and tantalizing of phenomena - the sea.
