Encyclopedia of Dinosaurs and Prehistoric Life

No other continent on Earth has undergone such radical environmental changes as Antarctica. In its transition from rich biodiversity to the barren, cold land of blizzards we see today, Antarctica provides a dramatic case study of how subtle changes in continental positioning can affect living communities, and how rapidly catastrophic changes can come about. Antarctica has gone from paradise to polar ice in just a few million years, a geological blink of an eye when we consider the real age of Earth. Frozen in Time presents a comprehensive overview of the fossil record of Antarctica framed within its changing environmental settings, providing a window into a past time and environment on the continent. It reconstructs Antarctica's evolving animal and plant communities as accurately as the fossil record permits. The story of how fossils were first discovered in Antarctica is a triumph of human endeavour. It continues today with modern expeditions going out to remote sites every year to fill in more of the missing parts of the continent's great jigsaw of life.

The Sixth Extinction

Journey back in time and find out where the dinosaurs roamed. This unique children's atlas explores each continent, revealing fossil sites and stories on every map. Part of the best-selling What's Where on Earth series, this atlas is packed with maps of early Earth and more than 50 profiles of dinosaurs and other prehistoric animals. Stare down a T. Rex in North America. Watch out for the Velociraptors' slashing claws in the Gobi Desert. Trek across the Siberian tundra and discover a woolly mammoth. This stunning book makes every animal come to life using breathtaking computer-generated imagery. Using specially commissioned maps, this dinosaur atlas shows you what the world looked like millions of years ago. A modern 3D globe next to each map helps you understand the arrangement of the continents over time and why we find fossils where we do. You can see what paleontologists (dinosaur

experts) have dug up over the centuries in each continent and learn how they put together a picture of the past from a puzzle of ancient clues. Where on Earth? Dinosaurs reveals the prehistoric world as never before, and is an essential addition to the library of every young dinosaur expert.

Ice Age Beasts

Presents an introduction to prehistoric life, describing dinosaurs, plant life, and the evolutionary stages of early man, with images of fossil remains and discussions of the possible events that led to the extinction of many early life forms.

Frozen in Time

A to Z of Dinosaurs and Prehistoric Animals

What can long-dead dinosaurs teach us about our future? Plenty, according to paleontologist Kenneth Lacovara, who has discovered some of the largest creatures to ever walk the Earth. By tapping into the ubiquitous wonder that dinosaurs inspire, Lacovara weaves together the stories of our geological awakening, of humanity's epic struggle to understand the nature of deep time, the meaning of fossils, and our own place on the vast and bountiful tree of life. Go on a journey—back to when dinosaurs ruled the Earth—to discover how dinosaurs achieved feats unparalleled by any other group of animals. Learn the secrets of how paleontologists find fossils, and explore quirky, but profound questions, such as: Is a penguin a dinosaur? And, how are the tiny arms of T. rex the key to its power and ferocity? In this revealing book, Lacovara offers the latest ideas about the shocking and calamitous death of the dinosaurs and ties their vulnerabilities to our own. Why Dinosaurs Matter is compelling and engaging—a great reminder that our place on this planet is both precarious and potentially fleeting. “As we move into an uncertain environmental future, it has never been more important to understand the past.”

The Simon & Schuster Encyclopedia of Dinosaurs & Prehistoric Creatures

"Over the last half billion years, there have been five major mass extinctions, when the diversity of life on Earth suddenly and dramatically contracted. Scientists are currently monitoring the sixth extinction, predicted to be the most devastating since the asteroid impact that wiped out the dinosaurs. This time around the cataclysm is us. In this book the author tells us why and how human beings have altered life on the planet in a way no species has before. She provides a moving account of the disappearances of various species occurring all around us and traces the evolution of extinction as concept, from its first articulation by Georges Cuvier in revolutionary Paris up to Lyell and Darwin, and through the present day. The sixth extinction is likely to be mankind's most lasting legacy, compelling us to rethink the fundamental question of what it means to be human". -- Back cover.

Spotlights - Dinosaurs and Prehistoric Life

Follows the footsteps of life from the very first creatures and sea animals, to plants and arthropods leaving the water to live and walk on land, the evolution of reptiles and mammals, up to the early humans. Photographs of fossils, skulls, models and reconstructions are included.

Dinosaurs Discovered

From the origin of life, through the age of dinosaurs stalked by the terrifying Tyrannosaurus rex, to the earliest humans, this book tells the story of life on Earth. Dinosaurs may be the stars of the show, but the book is truly comprehensive, with fossil plants, invertebrates, amphibians, fish, birds, reptiles, mammals, and even early bacteria conjuring up an entire past world. To put all of these extinct species in context, the book explores geological time and the way life-forms are classified. It also looks at how fossils preserve the story of evolution, and how it can be deciphered. The chapter on "Young Earth" explains how forces shaped Earth and steered the course of life. The main part of the book - "Life on Earth" - lays out and catalogues the rich story of life, from its beginnings 4 billion years ago, through each geological period, such as the Jurassic and Cretaceous, to the present. The stunning visuals and authoritative text make Dinosaurs and Prehistoric Life a fascinating and revealing encyclopedia that will appeal to the whole family.

Children's Encyclopedia - Dinosaurs

In the long history of life on our planet, dinosaurs have pride of place as an evolutionary landmark and have understandably captured most of the press but what about life before and after the 'monstrous lizards' had their day? How much do we know about the astounding diversity of creatures that first swam, slithered, crawled, ran and flew across the ancient Earth? With concise, jargon-free text and approximately 350 full-colour illustrations and photo-real computer graphics, this book is a definitive reference to the inhabitants of the prehistoric world, and a complete story of life on our planet. The award-winning team at Framestore, of Walking With Dinosaurs fame, bring never-before seen creatures to life, such as Meganeuria, a giant carnivorous dragonfly; the sail-backed killer Dimetrodon; and Gorgonopsid, a sabre-toothed desert predator that looked like a cross between a monitor lizard and a lion. The book covers environments as distinct as grasslands, wetlands, forests, mountains and oceans, and features species dating from the Cambrian Period (c. 500 million years ago) all the way through to the Pleistocene Epoch (c. 1.8 million - 11,000 years ago), with in-depth information on their lifestyles, habitats, behaviour and distribution across the prehistoric Earth.

Critical Reflections on Migration, 'Race' and Multiculturalism

Compiles facts on prehistoric life, including plants, fish, reptiles, and humans.

The Dinosaurs Book and Other Prehistoric Life

This title looks at the Earth before people ruled the planet. It begins with the earliest plants and animals, through the age of the dinosaurs and up to the ice ages. It also looks at the evidence that tells the story of prehistoric life, from rocks and fossils to dinosaur skeletons.

Fossils for Kids

The history of the Earth and the history of life are endlessly fascinating to readers who want to know about origins: where did the landscape come from, where did life come from, where did humans come from? Many may think the story has been told before, and the details are rather well established and even somewhat hackneyed in popular presentations. However, scientific research is advancing fast, and new finds, and especially new methods, are providing much more detail throughout. New finds often overturn well-established views. The aim of the book is to present the grand narrative, but also to show how earth scientists and palaeontologists know what they know. New analytical techniques allow ever more accurate dating of the rocks, and interdisciplinary studies using geochemistry, palaeontology, and geology provide new insights into global change, linking the evolution of life with the evolution of climates. The book will be of interest to dinosaur and fossil fans of course, but it will also present an authoritative and up-to-date account that will provide a useful introduction for those interested in global change, climate evolution, and the origins of modern biodiversity.
