## Fast Facts for the ER Nurse

A unique pocket guide to the use of ultrasound at the point of care. Lately, there has been an enormous amount of interest in the use of ultrasound for both procedural and diagnostic guidance at the point of care. Although this type of instruction can be found in some textbooks, they are heavy, dense, and written for the classroom, not real-world clinical situations. Pocket Guide to POCUS is the portable, quick-hit alternative. Pocket Guide to POCUS provides trainees with the tips and reminders they may need at the point of care. Things such as what images to acquire, and how to get them, or a quick glance at pathology in comparison to a normal image. For learners at all levels, this pocket guide will hopefully reduce their fear of scanning, while preventing some of the more common pitfalls the authors have observed over their more than 50 cumulative years' experience. Each chapter of the book is divided into four sections: • Key Images • Acquisition Tips • Interpretation and Pitfalls • Examples of Pathology This information is conveniently located on cards that can be removed from the book and brought with you to the bedside. You can take notes on the cards, check off the scans that you've done, and of course, refer to them in order to provide your patients with the best care possible.

## Quick Reference to Critical Care

An indispensable pocket reference for critical care trainees, consultants and intensive care nurses, this new Oxford Specialist Handbook provides an evidence-based approach to all aspects of patient care in cardiothoracic intensive care. Written in the Oxford Handbook format, each section is comprised of short

topics ideal for quick reference. Portable, accessible, and reliable, the book equips the clinician with the basic scientific and clinical knowledge to safely assist in formulating management plans, based on current best practice. Cardiothoracic Critical Care addresses major recent developments in cardiothoracic critical care, such as cardiovascular support, mechanical support (IABP, VADS, and ECMO), and drug therapies such as nitric oxide and other new inotropic agents. The management of postoperative bleeding is covered in detail, as it increasingly involves updated fluid and blood-product therapies including blood preservation techniques such as cell salvage.

### Critical Care and Emergency Nursing

Emergency nursing requires rapid assessment and decision-making. Often nurses are required to make sense of considerable amounts of information and act on it. The Oxford Handbook of Emergency Nursing provides an essential resource when time is short and the need for practical clinical guidance is paramount. This second edition has been fully updated to reflect new guidelines and approaches which have impacted emergency nursing in recent years. This handbook provides clear, focussed information that will aid all areas of patient assessment and management in emergency care. The concise format will enable the reader to quickly locate the information needed and provides alerts regarding critical 'must-dos' for ill adults and children. The skills section provides a quick summary of the many clinical skills needed in emergency care, ideal as an introduction for the uninitiated and as a refresher for skills performed infrequently. Additionally, this second edition has been expanded to cover nursing in major trauma and emergencies in the elderly. This handbook will empower nurses to deliver excellence in emergency care. Written by practising nurses and subject experts, the Oxford Handbook of Emergency Nursing is a unique and invaluable companion for

qualified and student nurses, and to all health care professionals working in the emergency care setting.

### Pediatric Emergencies

The critical care management of patients with life-threatening neurological conditions requires the ability to treat neurological injuries, manage medical complications and perform invasive procedures whilst balancing the management of the brain and the body. The Oxford Textbook of Neurocritical Care provides an authoritative and up-to-date summary of the scientific basis, clinical techniques and management guidelines in this exciting clinical discipline. This highly authoritative textbook is conceptually divided into three sections. Section 1 provides an accessible guide to the general principles of neurophysiology and neuropharmacology, cardiorespiratory support, management of fluids and intracranial hypertension. Section 2 outlines the use of multiple monitoring modes which are crucial to diagnosis and management. Section 3 covers the management of the major pathologies encountered during neurointensive care with an emphasis on evidence-based practice or consensus guidelines to provide a cohesive and definitive clinical resource. Authored by an international team of expert practitioners this textbook reflects world-wide practice and guidelines. This volume is published with a concurrent online version, which features access to the full content of the textbook, contains links from the references to primary research journal articles, allows full text searches, and provides access to figures and tables that can be downloaded to PowerPoint RG. Designed for consultants and trainees in neurocritical care, The Oxford Textbook of Neurocritical Care is also accessible to the general critical care physician and trainees who need a definite and authoritative resource to meet the unique needs of neurocritically ill patients.

### Critical Care Nursing Made Incredibly Easy!

Why write a book on the management of critically ill patients? Over the past few decades we have seen an enormous growth in the number of intensive care units (ICU) across the world. Indeed, it is estimated that a large proportion of health care expenses are devoted to patients in these specialized units. Medical students, residents, fellows, attending physicians, critical care nurses, pharmacists, respiratory therapists, and other health-care providers (irrespective of their ultimate field of practice) will spend several months or years of their professional lives taking care of critically ill or severely injured patients. These clinicians must have special training, experience, and competence in managing complex problems in their patients. Moreover, these clinicians must interpret data obtained by many kinds of monitoring devices, and they must integrate this information with their knowledge of the pathophysiology of disease. Even more important is the fact that anyone working in an ICU or with a critically ill patient must approach patients with a multidisciplinary team. The phrase there is no I in TEAM comes to mind.
