Every year roughly 100,000 fatal and injury crashes occur in the United States involving large trucks and buses. The Federal Motor Carrier Safety Administration (FMCSA) in the U.S. Department of Transportation works to reduce crashes, injuries, and fatalities involving large trucks and buses. FMCSA uses information that is collected on the frequency of approximately 900 different violations of safety regulations discovered during (mainly) roadside inspections to assess motor carriers' compliance with Federal Motor Carrier Safety Regulations, as well as to evaluate their compliance in comparison with their peers. Through use of this information, FMCSA's Safety Measurement System (SMS) identifies carriers to receive its available interventions in order to reduce the risk of crashes across all carriers. Improving Motor Carrier Safety Measurement examines the effectiveness of the use of the percentile ranks produced by SMS for identifying high-risk carriers, and if not, what alternatives might be preferred. In addition, this report evaluates the accuracy and sufficiency of the data used by SMS, to assess whether other approaches to identifying unsafe carriers would identify high-risk carriers more effectively, and to reflect on how members of the public use the SMS and what effect making the SMS information public has had on reducing crashes.

The Georgics has for many years been a source of fierce controversy among scholars of Latin literature. Is the work optimistic or pessimistic, pro- or anti-Augustan? Should we read it as a eulogy or a bitter critique of Rome and her imperial ambitions? This book suggests that the ambiguity of the poem is the product of a complex and thorough-going engagement with earlier writers in the didactic tradition: Hesiod, Aratus and - above all - Lucretius. Drawing on both traditional, philological approaches to allusion, and modern theories of intertextuality, it shows how the world-views of the earlier poets are

subjected to scrutiny and brought into conflict with each other. Detailed consideration of verbal parallels and of Lucretian themes, imagery and structural patterns in the Georgics forms the basis for a reading of Virgil's poem as an extended meditation on the relations between the individual and society, the gods and the natural environment.

There are approximately 4,000 fatalities in crashes involving trucks and buses in the United States each year. Though estimates are wide-ranging, possibly 10 to 20 percent of these crashes might have involved fatigued drivers. The stresses associated with their particular jobs (irregular schedules, etc.) and the lifestyle that many truck and bus drivers lead, puts them at substantial risk for insufficient sleep and for developing short- and long-term health problems. Commercial Motor Vehicle Driver Fatigue, Long-Term Health and Highway Safety assesses the state of knowledge about the relationship of such factors as hours of driving, hours on duty, and periods of rest to the fatigue experienced by truck and bus drivers while driving and the implications for the safe operation of their vehicles. This report evaluates the relationship of these factors to drivers' health over the longer term, and identifies improvements in data and research methods that can lead to better understanding in both areas.

Virgil on the Nature of Things

"Well dear Jim it breaks my heart to write this letter. Our dear [brother] was killed yesterday morning at 5.30. The bullet killed him instantly and he never spoke a word. I had just left him and gone down the trench to see the other lads when I was called back. Oh Jim it is awful...Oh I do hope he is the last..." It is April 27, 1918, Jim's brother writes from the battlefields of France. Of five brothers serving on the Western Front, three have given their lives; another has been hospitalised. Six agonising months of brutal warfare were yet to be endured. The Great War was a senseless tragedy. Its long shadow darkened the four corners of the world. In Mologa, Victoria, once a bustling community, stands a lonely stone memorial. Etched within the granite are the names of the Marlow brothers and their mates; a testament to ordinary people who became heroes. ANZAC Sons is composed from a collection of over five hundred letters and postcards written by the brothers who served. From the training grounds of Victoria, Egypt and England, to the Western Front battlefields - Pozieres, Bullecourt, Messines, Menin Road,

Passchendaele, Villers-Bretonneux and the village battles of 1918 - this compelling true story was compiled by the granddaughter of a surviving brother. She takes us on her journey as she walks in the footsteps of her ancestors. This is a story of mateship, bravery and sacrifice; it is a heartbreaking account of a family torn apart by war. It is a pledge to never forget.

In the arena of Parasitic-Aware Design of CMOS RF Circuits, efforts are aimed at the realization of true single-chip radios with few, if any, off-chip components. Ironically, the on-chip passive components required for RF integration pose more serious challenges to SOC integration than the active CMOS and BJT devices. This is not surprising since modern digital IC designs are dominated as much, or more, by interconnectg characteristics than by active device properties. In any event, the co-integration of active and passive devices in RFIC design represents a serious design problem and an even more daunting manufacturing challenge. If conventional mixed-signal design techniques are employed, parasitics associated with passive elements (resistors, capacitors, inductors, transformers, pads, etc.) and the package effectively de-tune RF circuits rendering them sub-optimal or virtually useless. Hence, dealing with parasitics in an effective way as part of the design process is an essential emerging methodology in modern SOC design. The parasitic-aware RF circuit synthesis techniques described in this book effectively address this critical problem.
