The Secret Door To Success - The Classic Florence Scovel Shinn Trilogy

In the late 1960s British mathematician John Conway invented a virtual mathematical machine that operates on a two-dimensional array of square cell. Each cell takes two states, live and dead. The cells' states are updated simultaneously and in discrete time. A dead cell comes to life if it has exactly three live neighbours. A live cell remains alive if two or three of its neighbours are alive, otherwise the cell dies. Conway's Game of Life became the most programmed solitary game and the most known cellular automaton. The book brings together results of forty years of study into computational, mathematical, physical and engineering aspects of The Game of Life cellular automata. Selected topics include phenomenology and statistical behaviour; space-time dynamics on Penrose tiling and hyperbolic spaces; generation of music; algebraic properties; modelling of financial markets; semi-quantum extensions; predicting emergence; dual-graph based analysis; fuzzy, limit behaviour and threshold scaling; evolving cell-state transition rules; localization dynamics in quasi-chemical analogues of GoL; self-organisation towards criticality; asynochrous implementations. The volume is unique because it gives a comprehensive presentation of the theoretical and experimental foundations, cutting-edge computation techniques and mathematical analysis of the fabulously complex, self-organized and emergent phenomena

defined by incredibly simple rules.

The Game of Life

The President of Williams College faces a firestorm for not allowing the women's lacrosse team to postpone exams to attend the playoffs. The University of Michigan loses \$2.8 million on athletics despite averaging 110,000 fans at each home football game. Schools across the country struggle with the tradeoffs involved with recruiting athletes and updating facilities for dozens of varsity sports. Does increasing intensification of college sports support or detract from higher education's core mission? James Shulman and William Bowen introduce facts into a terrain overrun by emotions and enduring myths. Using the same database that informed *The Shape of the River*, the authors analyze data on 90,000 students who attended thirty selective colleges and universities in the 1950s, 1970s, and 1990s. Drawing also on historical research and new information on giving and spending, the authors demonstrate how athletics influence the class composition and campus ethos of selective schools, as well as the messages that these institutions send to prospective students, their parents, and society at large. Shulman and Bowen show that athletic programs raise even more difficult questions of educational policy for small private colleges and highly selective universities than they do for big-time scholarship-granting schools. They discover that today's athletes, more so than their predecessors, enter college less academically well-prepared and with

different goals and values than their classmates--differences that lead to different lives. They reveal that gender equity efforts have wrought large, sometimes unanticipated changes. And they show that the alumni appetite for winning teams is not--as schools often assume--insatiable. If a culprit emerges, it is the unquestioned spread of a changed athletic culture through the emulation of highly publicized teams by low-profile sports, of men's programs by women's, and of athletic powerhouses by small colleges. Shulman and Bowen celebrate the benefits of collegiate sports, while identifying the subtle ways in which athletic intensification can pull even prestigious institutions from their missions. By examining how athletes and other graduates view The Game of Life--and how colleges shape society's view of what its rules should be--Bowen and Shulman go far beyond sports. They tell us about higher education today: the ways in which colleges set policies, reinforce or neglect their core mission, and send signals about what matters.

Most people consider life a battle, but it is not a battle, it is a game. It is a game, however, which cannot be played successfully without the knowledge of spiritual law, and the Old and the New Testaments give the rules of the game with wonderful clearness. Jesus the Christ taught that it was a great game of Giving and Receiving. Florence Scovel Shinn taught metaphysics in New York for many years. Her meetings were well attended and in that way she was the means of bringing the message to a considerable number of people. Her books have had a wide circulation not only in America but abroad. They seem to have a knack of finding their way to remote and unexpected places in Europe and other parts of the world. Now and again we meet someone who came into Truth through finding a Florence Shinn book in the most improbable location. One secret of her success was that she was always herself . . . colloquial, informal, friendly, and humorous. She never sought to be literary, conventional, or impressive. For this reason she appealed to thousands who would not have taken the spiritual message through the more conservative and dignified forms, or have been willing to read . . . at least in the beginning . . . the standard metaphysical books. She herself was very spiritual, although this was usually hidden behind a matter of fact and carefree treatment of

her subject. The technical or academic approach was not for her. She taught by familiar, practical, and everyday examples. She had been by profession an artist and book illustrator before becoming a Truth teacher, and belonged to an old Philadelphia family. She left a collection of notes and memoranda which have been made into the present book. May it have a wide circulation. —Emmet Fox
