Why we should prepare for climate change now by taking anticipatory action in

vulnerable regions. Global momentum is building to reduce greenhouse gas emissions. So far, so good. The less happy news is that Earth's temperatures will continue to rise for decades. And evidence shows that climbing temperatures are already having serious consequences for vulnerable people and regions through droughts, extreme weather, and melting glaciers. In this book, climate experts Michael Mastrandrea and Stephen Schneider argue that we need to start adapting to climate change, now. They write that these efforts should focus primarily on identifying the places and people most at risk and taking anticipatory action—from developing drought-resistant crops to building sea walls. The authors roundly reject the idea that reactive, unplanned adaptation will solve our problems—that species will migrate northward as climates warm, and farmers will shift to new crops and more hospitable locations. And they are highly critical of “geoengineering” schemes that are designed to cool the planet by such methods as injecting iron into oceans or exploding volcanoes. Mastrandrea and Schneider insist that smart adaptation will require a series of local and regional projects, many of them in the countries least able to pay for them and least responsible for the problem itself. Ensuring that we address the needs of these countries, while we work globally to reduce emissions over the long term, is our best chance to avert global disaster and to reduce the terrible, unfair burdens that are likely to accompany global warming.

This book tells the story of the renaissance of the Kurna language, the language of Adelaide and the Adelaide Plains in South Australia, principally over the earliest period up until 2000, but with a summary and brief discussion of developments from 2000 until 2016. It chronicles and analyses the efforts of the Nunga community, and interested others, to reclaim and relearn a linguistic heritage on the basis of mid-nineteenth-century materials. This study is breaking new ground. In the Kurna case, very little knowledge of the language remained within the Aboriginal community. Yet the Kurna language has become an important marker of identity and a means by which Kurna people can further the struggle for recognition, reconciliation and liberation. This work challenges widely held beliefs as to what is possible in language

The Compact Oxford English Dictionary

The issues of medical ethics, from moral quandaries of euthanasia and the morality of killing to political dilemmas like fair healthcare distribution, are rarely out of today's media. This area of ethics covers a wide range of issues, from mental health to reproductive medicine, as well as including management issues such as resource allocation, and has proven to hold enduring interest for the general public as well as the medical practitioner. This Very Short Introduction provides an invaluable tool with which to think about the ethical values that lie at the heart of medicine. This new edition explores the ethical reasoning we can use to approach medical ethics, introducing the most important 'tools' of ethical reasoning, and discussing how argument, thought experiments, and intuition can be combined in the consideration of medical ethics. Considering its practical application, Tony Hope and Michael Dunn explore how medical ethics supports health professionals through the growing use of ethics expertise in clinical settings. They also contemplate the increasingly important place of medical ethics in the wider social context, particularly in this age of globalization, not only in healthcare practice, but also policy, discussions in the media, pressure group and activism settings, and in legal judgments.
