Finding new, safe ways to consume food has become complicated as people become more health conscious about the foods they put into their bodies. This work offers information on the field of altering foods for human consumption. It describes the differences between synthetic, engineered, irradiated, and organic foods.

Oxford Primary Illustrated Science Dictionary

Mondragon is a sci-fi/biopunk action adventure set more than a thousand years in the future, after a ceasefire between genetically mutated Martian colonists known as "newstylers" and the unmodified "accidentals" back on Earth. In Shanghai, Earth's capital, battle-weary Derek Mondragon looks after wounded fellow soldier MacCullum, the last casualty of the Newstyler Rebellion. Meanwhile, his home life deteriorates, resulting in the mother of his child abandoning them both. Derek is troubled by MacCullum's obsession with an ancient codex that warns of an existential threat tied to the current interplanetary conflict. When MacCullum is attacked in his hospital room for that knowledge, and then Derek's young daughter is removed to a hatchery (a state-run orphanage that turns kids into science projects), Derek goes AWOL to take matters into his own hands, only to land unexpectedly in the middle of a secret mission that might decide the fate of everyone on both planets.

Books in the Teaching English Language Learners (ELLs) across the Curriculum Series are written specifically for pre- and in- service teachers who may not have been trained in ELL techniques, but still find themselves facing the realities and challenges of today's diverse classrooms and learners. Each book provides simple and straightforward advice on how to teach ELLs through a given subject area, and how to teach content to ELLs who are at different levels of English language proficiency than the rest of their class. Authored by both language and content area specialists, each volume arms readers with practical, teacher-friendly strategies, and subject-specific techniques. Teaching Science to English Language Learners offers science teachers and teacher educators a straightforward approach for engaging ELLs learning science, offering examples of easy ways to adapt existing lesson plans to be more inclusive. The practical, teacher-friendly strategies and techniques included here are proven effective with ELLs, and many are also effective with all students. The book provides context-specific strategies for the full range of the secondary sciences curriculum, including physical science, life science, earth and space science, science as inquiry, and history and nature of science and more. A fully annotated list of web and print resources completes the book, making this a one volume reference to help science teachers meet the challenges of including all learners in effective instruction. Special features: practical examples of science exercises make applying theory to practice simple when teaching science to ELLs an overview of the National Science Education Standards offers useful guidelines for effective instructional and assessment practices for ELLs in secondary grades graphs, tables, and illustrations provide additional access points to the text in clear, meaningful ways.
