During the 1930s, the world of photography was unsettled,

exciting, and boisterous. John Raeburn's *A Staggering Revolution* recreates the energy of the era by surveying photography's rich variety of innovation, exploring the aesthetic and cultural achievements of its leading figures, and mapping the paths their pictures blazed public's imagination. While other studies of thirties photography have concentrated on the documentary work of the Farm Security Administration (FSA), no previous book has considered it alongside so many of the decade's other important photographic projects. *A Staggering Revolution* includes individual chapters on Edward Steichen's celebrity portraiture; Berenice Abbott's Changing New York project; the Photo League's ethnography of Harlem; and Edward Weston's western landscapes, made under the auspices of the first Guggenheim Fellowship awarded to a photographer. It also examines Margaret Bourke-White's industrial and documentary pictures, the collective undertakings by California's Group f.64, and the fashion magazine specialists, as well as the activities of the FSA and the Photo League.

They fondly remember the times when they buzzed over the homes of their Florida "families" to let them know to expect

them for Sunday dinner. More than fifty years later, their stories still resonate with universal emotions: fear of failure, love of country, camaraderie, romantic love, and the pain of tragic deaths. Their stories also remind the American reader of a unique time in our history, when, poised on the brink of war, the United States reached out to help a country in distress."--BOOK JACKET.

A fully illustrated guide to the ancient Hawaiian art of massage with hot stones • Includes illustrated instructions for each area of the body • Explains how to combine hot stone massage with gemstone chakra treatment, detailing the specific healing powers of 54 gemstones • Recommends which base oils and essential oils enhance the effects of hot stone massage Since ancient times, the people of Hawaii have used hot stones for both physical and spiritual healing. Using basalt stones--fine-grained, high-density volcanic rocks with an exceptional ability to store heat--hot stone massage not only dispels tensions and soothes the soul but also enhances lymph flow, removes toxins, and fortifies the immune system. The treatment causes blood vessels to dilate, leading to improved circulation and consequently improved oxygen, nutrient, antibody, and protective cell supply to the area of the body under the stones and is extremely effective for joint problems, back pain, and sore muscles. Beyond the strictly physical benefits, the massage also stimulates the meridians and chakras, gently dissipating energetic blockages. This book provides step-by-step, fully illustrated instructions for treatments for each area of the body. The authors then include details on the specific healing powers of 54 gemstones, showing how to further enhance the

benefits of hot stone massage with gemstone chakra treatment. For instance, in facial massage, working with amethyst can alleviate headaches and help heal skin blemishes. They also describe the therapeutic benefits of several base and essential oils and recommend specific combinations for hot stone massage. The power of the stones, the warmth of the treatment, and the massage itself unite in this holistic therapy to provide deep relaxation and calm that recharges the body and soul.

With the narrative punch of Jonathan Harr's *A Civil Action* and the commitment to environmental truth-telling of Erin Brockovich, *The Fluoride Deception* documents a powerful connection between big corporations, the U.S. military, and the historic reassurances of fluoride safety provided by the nation's public health establishment. *The Fluoride Deception* reads like a thriller, but one supported by two hundred pages of source notes, years of investigative reporting, scores of scientist interviews, and archival research in places such as the newly opened files of the Manhattan Project and the Atomic Energy Commission. The book is nothing less than an exhumation of one of the great secret narratives of the industrial era: how a grim workplace poison and the most damaging environmental pollutant of the cold war was added to our drinking water and toothpaste.

The achievement gap between white students and African American and Hispanic students has been debated by scholars and lamented by policymakers since it was first documented in 1966. The average black or Hispanic secondary school student currently achieves at about the same level as the average white student in the lowest quartile of white achievement. Black and Hispanic students are much less likely than white students to graduate from high school, acquire a college or advanced degree, or earn a middle-class living. They are also much more likely than whites to suffer social problems that often accompany low income. While educators have gained an understanding of the causes and effects of the education achievement gap, they have been less successful in finding ways to eliminate it—until now. This book provides, for the first time in one place, evidence that the achievement gap can be bridged. A variety of schools and school reforms are boosting the achievement of black and Hispanic students to levels nearing those of whites. Bridging the Achievement Gap brings together the findings of renowned education scholars who show how various states, school districts, and individual schools have lifted the achievement levels of poor and minority students. The most promising strategies include focusing on core academic skills, reducing class size, enrolling students in more challenging courses, administering annual achievement assessment tests, creating schools with a culture of competition and success, and offering vouchers in big-city school districts. While implementing new educational programs on a large scale is fraught with difficulties, these successful reform

efforts offer what could be the start of widespread effective solutions for bridging the achievement gap.

Killing Our Own

Normal0falsefalsefalseMicrosoftInternetExplorer4 By the Noble Daring of Her Sons is a tale of ordinary Florida citizens who, during extraordinary times, were called to battle against their fellow countrymen. Over the past twenty years, historians have worked diligently to explore Florida's role in the Civil War. Works describing the state's women and its

wartime economy have contributed to this effort, yet until recently the story of Florida's soldiers in the Confederate armies has been little studied. This volume explores the story of schoolmates going to war and of families left behind, of a people fighting to maintain a society built on slavery and of a state torn by political and regional strife. Florida in 1860 was very much divided between radical democrats and conservatives. Before the war the state's inhabitants engaged in bitter political rivalries, and Sheppard argues that prior to secession Florida citizens maintained regional loyalties rather than considering themselves "Floridians." He shows that service in Confederate armies helped to ease tensions between various political factions and worked to reduce the state's regional divisions. Sheppard also addresses the practices of prisoner parole and exchange, unit consolidation and its effects on morale and unit identity, politics within the Army of Tennessee, and conscription and desertion in the Southern armies. These issues come together to demonstrate the connection between the front lines and the home front.

Twenty-one writers answer the call for literature that addresses who we are by understanding where we are--where, for each of them, being in some way part of academia. In personal essays, they imaginatively delineate and engage the diverse, occasionally unexpected play of place in shaping them, writers and teachers in varied environments, with unique experiences and distinctive world views, and reconfiguring for them conjunctions of identity and setting, here, there, everywhere, and in between.

us begin to put not only movement, but also vision, back into the labor movement. There is a blossoming of rank-and-file worker organizations throughout the world that are countering rapacious capitalists and labor leaders who think they know more about work and struggle than their own members. To secure the gains of solidarity unions, Lynd has proposed parallel bodies of workers who share the principles of rank-and-file solidarity and can coordinate the activities of local workers' assemblies. Detailed and inspiring examples include experiments in workers' self-organization across industries in steel-producing Youngstown, as well as horizontal networks of solidarity formed in a variety of U.S. cities and successful direct actions overseas. This book is not a prescription but reveals the lived experience of working people continuously taking risks for the common good.

"Through Feminist Eyes gathers in one volume the most incisive and insightful essays written to date by the distinguished Canadian historian Joan Sangster. To the original essays, Sangster has added reflective introductory discussions that situate her earlier work in the context of developing theory and debate. Sangster has also supplied an introduction to the collection in which she reflects on the themes and theoretical orientations that have shaped the writing of women's history over the past thirty years. Approaching her subject matter from an array of interpretive frameworks that engage questions of gender, class, colonialism, politics, and labour, Sangster explores the lived experience of women in a variety of specific historical settings. In so doing, she sheds new light on issues that have sparked much debate among feminist historians and offers a

thoughtful overview of the evolution of women's history in Canada."--Pub. desc.

Dave Ross (1871-1943) and George Ade (1866-1944) were trustees, distinguished alumni and benefactors of Purdue University. Their friendship began in 1922 and led to their giving land and money for the 1924 construction of Ross-Ade Stadium, now a 70,000 seat athletic landmark on the West Lafayette campus. Their life stories date to 1883 Purdue and involve their separate student experiences and eventual fame. Their lives crossed paths with U.S. First Lady Eleanor Roosevelt, Henry Ford, Amelia Earhart, and Will Rogers among others. Gifts or ideas from Ross or Ade led to creation of the Purdue Research Foundation, Purdue Airport, Ross Hills Park, and Ross Engineering Camp. They helped Purdue Theater, the Harlequin Club and more. Ade, renowned author

and playwright, did butt heads with Purdue administrators at times long ago, but remains a revered figure. Ross's ingenious mechanical inventions of gears still steer millions of motorized vehicles, boats, tractors, even golf carts the world over.

In this hard-hitting and timely book, world-renowned scientists and writers Paul R. Ehrlich and Anne H. Ehrlich speak out against what they call the "brownlash." Brownlash rhetoric, created by public relations spokespersons and a few dissident scientists, is a deliberate misstatement of scientific findings designed to support an anti-environmental world view and political agenda. As such, it is deeply disturbing to environmental scientists across the country. The agenda of brownlash proponents is rarely revealed, and the confusion and distraction its rhetoric creates among policymakers and the public prolong an already difficult search for realistic and equitable solutions to global environmental problems. In *Betrayal of Science and Reason*, the Ehrlichs explain clearly and with scientific objectivity the empirical findings behind environmental issues including population growth, desertification, food production, global warming, ozone depletion, acid rain, and biodiversity loss. They systematically debunk revisionist "truths" and counter the erroneous information and misrepresentation put forth by the brownlash, presenting accurate scientific information about current environmental threats that can be used to evaluate critically and respond to the commentary of the brownlash. They include important background material on how science works and provide extensive references to pertinent scientific literature. In addition, they discuss how scientists can speak

out on matters of societal urgency yet retain scientific integrity and the support of the scientific community. *Betrayal of Science and Reason* is an eye-opening look at current environmental problems and the fundamental importance of the scientific process in solving them. It presents unique insight into the sources and implications of anti-environmental rhetoric, and provides readers with a valuable means of understanding and refuting the feel-good fables that constitute the brownlash.

The Coeur d'Alenes, a twenty-five by ten mile portion of the Idaho Panhandle, is home to one of the most productive mining districts in world history. Historically the globe's richest silver district and also one of the nation's biggest lead and zinc producers, the Coeur d'Alenes' legacy also includes environmental pollution on an epic scale. For decades local waters were fouled with tailings from the mining district's more than one hundred mines and mills and the air surrounding Kellogg, Idaho was laced with lead and other toxic heavy metals issuing from the Bunker Hill Company's smelter. The same industrial processes that damaged the environment and harmed human health, however, also provided economic sustenance to thousands of local residents and a string of proud, working-class communities. Living with Lead endeavors to untangle the costs and benefits of a century of mining, milling, and smelting in a small western city and the region that surrounds it.

Celestial Delights is essentially a 'TV Guide' for the sky. This will be its third edition. This title, which has aggregated sales of about 20,000 copies to date in its two previous editions and has found a niche with skygazers, is much awaited. Through extensive graphics integrated with an eight-year-long calendar of sky events, it provides a look at "don't miss" sky events, mostly for naked-eye and binocular observing. The book is organized by ease of observation - lunar phases and the brighter planets come first, while solar eclipses, the aurora, and comets come later. Celestial Delights also includes a hefty dose of sky lore, astronomical history, and clear overviews of current science. It provides a handy reference to upcoming naked-eye events, with information broken out in clear and simple diagrams and tables that are

cross-referenced against a detailed almanac for each year covered. Most broad-ranging astronomy field guides focus on stars, constellations, and the deep sky, but tend to ignore planetary events, which are in by far the most widely observable aspects of the changing night sky. *Celestial Delights* puts a variety of information all in one place, presents it in a friendly way that does not require prior in-depth astronomical knowledge, but provides the context and historical background for understanding events that astronomical computer programs or web sites lack.
