How do we create a universe of truthful and verifiable information, available to everyone? In The New Enlightenment and the Fight to Free Knowledge, MIT Open Learning's Peter B. Kaufman describes the powerful forces that have purposely crippled our efforts to share knowledge widely and freely. Popes and their inquisitors, emperors and their hangmen, commissars and their secret police—throughout history, all have sought to stanch the free flow of information. Kaufman writes of times when the Bible could not be translated—you'd be

burned for trying; when dictionaries and encyclopedias were forbidden; when literature and science and history books were trashed and pulped—sometimes along with their authors; and when efforts to develop public television and radio networks were quashed by private industry. In the 21st century, the enemies of free thought have taken on new and different guises—giant corporate behemoths, sprawling national security agencies, gutted regulatory commissions. Bereft of any real moral compass or sense of social responsibility, their work to surveil and control us are no less nefarious than their 16th- and 18th- and 20th- century predecessors. They are all part of what Kaufman calls the Monsterverse. The New Enlightenment and the Fight to Free Knowledge maps out the opportunities to mobilize for the fight ahead of us. With the Internet and other means of media production and distribution—video especially—at hand, knowledge institutions like universities, libraries, museums, and archives have a special responsibility now to counter misinformation, disinformation, and fake news—and especially efforts to control the free flow of information. A film and video producer and former book publisher, Kaufman begins to draft a new social contract for our networked video age. He draws his inspiration from those who fought tooth and nail against earlier incarnations of the Monsterverse—including William Tyndale in the 16th century; Denis Diderot in the 18th; untold numbers of Soviet and Central and East European dissidents in the 20th—many of whom paid the ultimate price. Their successors? Advocates of free knowledge like Aaron Swartz, of free software like Richard Stallman, of an enlightened public television and radio network like James Killian, of a freer Internet like Tim Berners-Lee, of fuller rights and freedoms like Edward Snowden. All have been striving to secure for us a better world, marked by the right balance between state, society, and private gain. The concluding section of the book, its largest piece, builds on their work, drawing up a progressive agenda for how today's free thinkers can band together now to fight and win. With everything shut and everyone going online, The New Enlightenment and the Fight to Free Knowledge is a rousing call to action that expands the definition of what it means to be a citizen in the 21st century.

IT TAKES A VILLAGE is a textbook for caring, filled with truths that are worth a read, and a reread. In her substantial new introduction, Senator Clinton reflects on how our village has changed over the last decade, from the internet to education, and on how her own understanding of children has deepened as she has watched Chelsea grow up and take on challenges new to her generation, from a first job to living through a terrorist attack. She discusses how the work she is doing in the Senate is helping children and looks at where America has been successful, improvements in the foster care system and support for adoption, and where there is still work to be done, providing pre-school programmes and universal health care to all our children. This new edition elucidates how the choices we make about how we raise our children, and how we support families, will determine how all nations will face the challenges of this century.

It's a tough time to be a scientist: universities are shuttering science departments, federal funding agencies are facing flat budgets, and many newspapers have dropped their science sections altogether. But according to Marc Kuchner, this antiscience climate doesn't have to equal a career death knell—it just means scientists have to be savvier about promoting their work and themselves. In *Marketing for Scientists*, he provides clear, detailed advice about how to land a good job, win funding, and shape the public debate. As an astrophysicist at NASA, Kuchner knows that "marketing" can seem like a superficial distraction, whether your daily work is searching for new planets or seeking a cure for cancer. In fact, he argues, it's a critical component of the modern scientific endeavor, not only advancing personal careers but also society's knowledge. Kuchner approaches marketing as a science in itself. He translates theories about human interaction and sense of self into methods for building relationships—one of the most critical skills in any profession. And he explains how to brand yourself effectively—how to get articles published, give compelling presentations, use social media like Facebook and Twitter, and impress potential employers and funders. Like any good scientist, Kuchner bases his conclusions on years of study and experimentation. In *Marketing for Scientists*, he distills the strategies needed to keep pace in a Web 2.0 world.

Stephen E. Ambrose draws upon extensive sources, an unprecedented degree of scholarship, and numerous interviews with Eisenhower himself to offer the fullest, richest, most objective rendering yet of the soldier who became president. He gives us a masterly account of the European war theater and Eisenhower's magnificent leadership as Allied Supreme Commander. Ambrose's recounting of Eisenhower's presidency, the first of the Cold War, brings to life a man and a country struggling with issues as diverse as civil rights, atomic weapons, communism, and a new global role. Along the way, Ambrose follows the 34th President's relations with the people closest to him, most of all Mamie, his son John, and Kay Summersby, as well as Franklin D. Roosevelt, Winston Churchill, Charles de Gaulle, Harry Truman, Nixon, Dulles, Khrushchev, Joe McCarthy, and indeed, all the American and world leaders of his time. This superb interpretation of Eisenhower's life confirms Stephen Ambrose's position as one of our finest historians.
